## **DETAILED ACTION**

### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

2. The information disclosure statement (IDS) submitted on 3/05 & 6/05 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner is considering the information disclosure statement.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1- 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tosaka et al [6667140] in view of Kuribayashi et al [20040009294] and Nakamura et al [20030195274]. Tosaka et al teaches the magenta toner with specific monoazo pigments. The pigments are Pigment Red 31 and Pigment Red 150 note Col.9 lines 15-30, 55 and Col. 10 line 30. The colorants are selected from the standpoints of hue angle, chroma, brightness, weather resistance, OHP permeability and dispersability in toners. Tosaka et al teaches the use of one or more pigments in combination note Col.9 line 17. The toners can be produced by polymerization Col. 15 in an aqueous dispersion

with wax Col. 16 line 55 – Col. 17 line 65. Additives such as charge control agents Col 18 line 50 and inorganic fine particles Col. 19 are added to control the chargeability of the toner. The combination of monoazo pigments is also taught in Kuribayashi et al note [0032] that states “These pigments may be used either singly or in any combination thereof”. Nakamura et al teaches a color toner and specific monoazo pigment composition note [0128]. These pigments can be used either individually or as a combination of two or more thereof in the microencapsulated pigment of the invention. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use the combination of monoazo pigments well known to the skilled worker in the toner composition with additives to control the dispersability, chargeability and hue of a toner particle.
